

**ABSTRACT OF THE DISCLOSURE**

5       A spray cool system with a dry access chamber for providing convenient access  
6       to specific spray system components in a dry chamber separate from the wet chamber.  
7       The spray cool system with a dry access chamber includes a chassis having a dry  
8       chamber and a wet chamber. A dry access door and a wet access door are removably  
9       attached about the dry chamber and the wet chamber respectively for providing access  
10      to the same. Spray cool components such as a card cage and a spray unit are  
11      positioned within the wet chamber. Spray cool components such as but not limited to  
12      filters, pumps, heaters, sensors, separators and the like are positioned within the dry  
13      chamber for efficient dry access.
